ROALLA

EXECUTIVE CONTACT CENTRE AI GUIDE

Contact Centre AI Transformation Guide 2026

A decision framework for improving customer experience, agent performance and operating economics

Prepared for Chief executives, customer experience, operations, technology, risk and contact-centre leaders

Prepared by ROALLA Transformation and Technology Advisory

Status date: 6 October 2026

Purpose

This guide helps management shape a contact-centre AI portfolio across agent assist, interaction intelligence, self-service and voice automation. It connects customer outcomes, workflow design, data, integration, workforce impact, privacy, service quality and economics before major platform commitments are made.

EXECUTIVE DECISION DASHBOARD

Management View at a Glance

Contact-centre AI should improve the customer and agent experience together. The strongest programs start with interaction evidence, redesign a bounded workflow, preserve human escalation and measure containment, quality, effort, resolution and trust rather than automation volume alone.

Executive question	ROALLA view	Decision implication
Is the customer problem specific?	**CONDITIONAL**	Select a journey with measurable effort, delay, error or dissatisfaction.
Is knowledge ready for AI?	**PREPARE**	Fix ownership, accuracy, access and change control before relying on generated answers.
Can the platform support the workflow?	**CONDITIONAL**	Validate CRM, CCaaS, identity, data, routing, observability and failover.
Will agents and customers trust it?	**DECIDE**	Design transparency, review, feedback, accessibility and human escalation.
What should management authorize?	**PURSUE**	One agent-assist pilot and an interaction-intelligence baseline.

Recommended Management Posture

Proceed through a small number of explicit decision gates. Preserve evidence as work occurs, separate discovery from implementation, and require each investment to demonstrate value, feasibility, control effectiveness and accountable ownership before scale.

EXECUTIVE DECISION MODEL

The Eight Contact Centre Transformation Gates

A contact-centre AI initiative must work within real customer journeys, agent workflows and service controls. A technically successful pilot is not ready to scale when quality, escalation, integration, privacy or workforce impacts remain unproven.

Stage	Gate	Required conclusion	Decision evidence
01	Journey	Priority customer need and interaction are defined	Journey evidence and service baseline
02	Use case	AI role and human handoff are bounded	Workflow, exceptions and ownership
03	Knowledge	Content is accurate, governed and retrievable	Source inventory, ownership and freshness
04	Data	Interaction data is lawful and usable	Authority, quality, redaction and retention
05	Platform	CCaaS, CRM and systems can integrate	Architecture, latency and continuity design
06	Quality	Evaluation reflects real service conditions	Accuracy, resolution and safety thresholds
07	Workforce	Roles, coaching and adoption are designed	Training, feedback and performance model
08	Economics	Benefits exceed delivery and operating costs	Volume, unit-cost and realization model

Decision Rule

A failed hard gate moves the initiative to Prepare or Monitor. A strong narrative, senior sponsor or attractive market cannot replace missing authority, evidence, delivery capacity or operating control.

SECTION 01

Readiness Framework

Translate ambition into a shared executive view of value, evidence, capability and risk.

Readiness Dimensions

Dimension	Decision area	Management evidence	Status
01	Customer experience	Access, effort, resolution, quality and trust	**Confirmed / Developing / Gap**
02	Agent experience	Cognitive load, guidance, after-call work and coaching	**Confirmed / Developing / Gap**
03	Knowledge	Ownership, accuracy, retrieval, freshness and evidence	**Confirmed / Developing / Gap**
04	Technology	CCaaS, CRM, data, identity, integration and latency	**Confirmed / Developing / Gap**
05	Governance	Privacy, recording, consent, oversight and quality	**Confirmed / Developing / Gap**
06	Economics	Volume, containment, productivity, cost and revenue	**Confirmed / Developing / Gap**

Evidence Standard

Assessments should distinguish verified evidence from management confidence. Where evidence is incomplete, record the gap, owner, completion date and decision that depends on it.

STRATEGIC READINESS DEPENDENCIES

What Readiness Depends On

Dependency	Why it matters	Evidence management should expect
Journey	Priority customer need and interaction are defined	Journey evidence and service baseline
Use case	AI role and human handoff are bounded	Workflow, exceptions and ownership
Knowledge	Content is accurate, governed and retrievable	Source inventory, ownership and freshness
Data	Interaction data is lawful and usable	Authority, quality, redaction and retention
Platform	CCaaS, CRM and systems can integrate	Architecture, latency and continuity design
Quality	Evaluation reflects real service conditions	Accuracy, resolution and safety thresholds
Workforce	Roles, coaching and adoption are designed	Training, feedback and performance model
Economics	Benefits exceed delivery and operating costs	Volume, unit-cost and realization model

ROALLA Interpretation

Dependencies should be evaluated as a connected system. A weakness in ownership, data, architecture, delivery or governance can change the economics and risk of an otherwise attractive initiative.

SECTION 02

Detailed Readiness Assessment

Convert executive intent into verifiable requirements, accountable evidence and clear remediation actions.

READINESS CHECKLIST

Customer Journey and Operating Readiness

Completion standard Mark Ready only when the supporting evidence has been verified. Assign an evidence owner to every open item.

Gate	Readiness requirement	Ready	Gap	Evidence owner
A01	Priority interaction types are supported by volume, effort, quality and outcome data.	☐	☐	_____
A02	The customer problem is defined independently of a preferred AI product.	☐	☐	_____
A03	Current journeys, transfers, repeat contacts, exceptions and escalation points are mapped.	☐	☐	_____
A04	Service standards and quality definitions are measurable across assisted and automated channels.	☐	☐	_____
A05	Agent research identifies cognitive load, knowledge gaps and avoidable work.	☐	☐	_____
A06	Knowledge sources have owners, approval rules, effective dates and retirement controls.	☐	☐	_____
A07	Language, accessibility and vulnerable-customer needs are included in design.	☐	☐	_____
A08	Customer and employee privacy expectations are understood for recording, transcription and analysis.	☐	☐	_____
A09	Workforce, labour and performance-management impacts are assessed early.	☐	☐	_____
A10	Operations, technology, privacy, security and quality leaders share decision rights.	☐	☐	_____

READINESS CHECKLIST CONTINUED

Solution and Scale Readiness

Completion standard Use Gap to create a dated remediation action and identify the management decision that cannot proceed.

Gate	Readiness requirement	Ready	Gap	Evidence owner
B01	The AI role is bounded across assist, summarize, recommend, automate or decide.	☐	☐	_____
B02	Human review and escalation are meaningful for sensitive or uncertain interactions.	☐	☐	_____
B03	CRM, CCaaS, knowledge, identity and back-office integrations have accountable owners.	☐	☐	_____
B04	Representative interactions are available for testing with appropriate controls and redaction.	☐	☐	_____
B05	Evaluation covers accuracy, grounding, latency, tone, safety, accessibility and task completion.	☐	☐	_____
B06	The design provides fallback when models, integrations or data sources fail.	☐	☐	_____
B07	Agent feedback and customer complaints can trigger investigation and change.	☐	☐	_____
B08	The pilot measures resolution, effort, handling time, quality, adoption and unintended effects.	☐	☐	_____
B09	Unit economics include model, platform, integration, quality, support and change costs.	☐	☐	_____
B10	Scale approval requires value, trust, control effectiveness and operational capacity.	☐	☐	_____

WEIGHTED EXECUTIVE ASSESSMENT

Readiness Scorecard

Dimension	Weight	Evidence standard	Score	Status
Customer experience	20%	Access, effort, resolution, quality and trust	__/20	Strong / Developing / Gap
Agent experience	20%	Cognitive load, guidance, after-call work and coaching	__/20	Strong / Developing / Gap
Knowledge	15%	Ownership, accuracy, retrieval, freshness and evidence	__/15	Strong / Developing / Gap
Technology	15%	CCaaS, CRM, data, identity, integration and latency	__/15	Strong / Developing / Gap
Governance	15%	Privacy, recording, consent, oversight and quality	__/15	Strong / Developing / Gap
Economics	15%	Volume, containment, productivity, cost and revenue	__/15	Strong / Developing / Gap
TOTAL	100%	Weighted executive assessment	__/100	Pursue / Prepare / Monitor

Decision Thresholds

Score	Posture	Management decision
75 to 100	**PURSUE**	Proceed to bounded execution subject to no hard-gate failure.
50 to 74	**PREPARE**	Complete a focused readiness plan before major commitment.
0 to 49	**MONITOR**	Resolve foundational gaps before investing further.

A single material hard-gate failure overrides the weighted score. ROALLA also applies judgment where administrative readiness is high but strategic value, adoption or commercial viability is weak.

SECTION 03

Execution and Advisory Roadmap

Sequence decisions, evidence and delivery so management can invest with confidence and stop weak initiatives early.

Recommended 90 Day Mobilization

Timing	Focus	Key activities	Management output
Days 1 to 15	Mobilize	Confirm sponsor, scope, decision rights, evidence request and priority outcomes.	Approved mandate and fact base
Days 16 to 35	Assess	Review current evidence, interview owners, score readiness and identify hard gates.	Verified gaps and risk view
Days 36 to 55	Design	Define target operating, architecture, control and delivery options with economics.	Decision-ready options
Days 56 to 75	Validate	Test assumptions with users, data, technology, vendors and accountable control owners.	Evidence-backed recommendation
Days 76 to 90	Authorize	Approve the roadmap, owners, funding, measures, next gate and stop conditions.	Executive investment decision

Twelve to Twenty Four Month Path

- Quarter 1: establish the fact base, governance and one bounded priority initiative.
- Quarter 2: prove value and control effectiveness in a production-relevant pilot.
- Quarters 3 and 4: scale reusable capabilities, operating ownership and benefits realization.
- Year 2: optimize economics, institutionalize governance and refresh the portfolio using measured results.

How ROALLA Can Help

ROALLA acts as the technology and commercialization advisor coordinating strategy, evidence, architecture, governance, partners and executive decisions. The objective is not to maximize activity. It is to direct management effort toward investments that are valuable, controllable and executable.

ROALLA workstream	Executive value
Executive diagnostic	Establish the current fact base, hard gates, readiness score and management decisions.
Strategy and portfolio	Translate corporate priorities into a bounded, sequenced investment portfolio.
Architecture and data	Define target capabilities, integration, data, model, cloud and operating patterns.
Governance and risk	Design decision rights, policies, evidence, controls, monitoring and escalation.
Commercial and financial case	Model customer value, productivity, cost, funding, timing and benefits realization.
Vendor and partner ecosystem	Structure evaluation, sourcing, research, delivery and commercial relationships.
Execution readiness	Build roadmaps, work plans, budgets, measures, owners and decision gates.
Ongoing assurance	Monitor the portfolio, challenge evidence and bring decision-ready options to leadership.

Recommended Initial Mandate

- Four-week executive readiness diagnostic using this guide.
- Prioritized decision and evidence map with Pursue, Prepare and Monitor recommendations.
- One flagship initiative dossier with roadmap, economics, architecture and control plan.
- Executive readout and 90-day mobilization plan with accountable owners.

CONTROL FRAMEWORK

Key Risks and Controls

Risk	Exposure	ROALLA control
Deflection bias	Automation volume is valued over resolution.	Measure customer outcomes, repeat contact and effort.
Knowledge	AI amplifies outdated or conflicting content.	Govern knowledge ownership and freshness.
Privacy	Recording and inference exceed reasonable purpose.	Limit collection, access, use, retention and disclosure.
Quality	Average test scores hide harmful failures.	Use scenario, cohort and severity-based evaluation.
Escalation	Customers cannot reach effective human support.	Design observable, timely handoff and override.
Workforce	AI increases surveillance or cognitive load.	Co-design workflows and define appropriate measures.
Integration	Latency or system failure breaks the journey.	Engineer fallback, observability and continuity.
Economics	Licence and usage costs erase benefits.	Model total unit economics and benefits realization.

Professional Advice

Qualified legal, privacy, security, tax, accounting, employment and regulatory advisors should validate matters within their professional scope. ROALLA coordinates those inputs with technology strategy, architecture, commercialization, governance and transformation decisions.

OFFICIAL EVIDENCE BASE

Selected Official Sources

These sources support the management principles summarized in this guide. Standards, laws, guidance and organizational obligations continue to evolve and must be confirmed for the specific context before acting.

NIST AI Risk Management Framework. Official source — Voluntary framework for governing, mapping, measuring and managing AI risk.
NIST Generative AI Profile. Official source — Companion risk profile for generative AI systems and use cases.
Office of the Privacy Commissioner of Canada AI guidance. Official source — Canadian privacy guidance for organizations developing or using AI.
Canadian privacy principles for generative AI. Official source — Privacy principles for development, provision and use of generative AI.
Government of Canada Digital Standards. Official source — User-centred, secure, accessible and iterative digital-service principles.
Government of Canada service and digital policy resources. Official source — Current policy, architecture, data, cloud, service and AI reference material.

Advisory Disclaimer

This ROALLA guide is a strategic readiness and marketing document. It is not a certification, audit opinion, legal opinion, privacy opinion, security assurance, investment recommendation or guarantee of results. Management must validate current obligations, company facts and professional advice before making material decisions.
